Proper care for your gallery style framed art:

1. Always handle framed art with two hands.
2. You will find two bumpons enclosed. (i.e., rubber cushions). Put them on the backside, on the frame's bottom corners. They protect your wall and art.
3. To display framed art safely, we recommend using two hanger clips for works larger than 16" x 20". You will find appropriate hanger clip(s) enclosed.
4. How to clean your UV glass for best results:
 - a. If possible remove the framed art from the wall, lay it flat on a horizontal surface, glass side up.
 - b. Use an ammonia-free glass cleaner.
We recommend *Sparkle* in the purple bottle.
 - c. Do Not spray the glass.
 - d. Apply the ammonia-free cleaner directly on a lint-free cloth then wipe the glass carefully.
 - e. Use a second lint-free cloth (i.e., dry) to wipe the glass clean of streaks for a clear finish.
 - f. If carefully done, this method will ensure that no glass cleaner residue will seep under the frame, thus damaging the art & mat board.
5. You will be satisfied with your art investment because we carefully handcraft our framed art with quality materials. That is our guarantee to you!
6. However, please be sure to:
 - a. Limit the art's exposure to unnecessary direct sunlight even though your UV windows & glass will block most of the sun's damaging rays.
 - b. Limit the art's exposure to excessive moisture (e.g., a bathroom/shower with no ventilation).
7. The next time you are at an art museum or an art gallery, observe your surroundings:
 - a. You will find little if any direct sunlight.
 - b. You will find instrument gauges to monitor the room's moisture content and quality.
8. With these instructions, you will enjoy your framed art... connecting you with memories for a lifetime.
